DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim(s) 1-3, 5-7, 11, 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gies et al. (5,355,910) in view of Klomhaus et al. (5,194,038). Gies et al. discloses all of the limitations of the claim(s) except for the relatively rigid layer operates to close the sealing flap irrespective of the pressure relief valve's orientation with respect to gravity. Klomhaus et al. discloses the presence of a relatively rigid layer operating to close the sealing flap irrespective of the pressure relief valve's orientation with respect to gravity. See fig. 1 of Gies et al. and abstract of Klomhaus et al. for the spring action of the flap. Hence, one skilled in the art would find it obvious to modify the system of Gies et al. to include the relatively rigid layer operating to close the sealing flap irrespective of the pressure relief valve's orientation with respect to gravity of Klomhaus et al. for the purpose of better flap performance in various situations. Regarding claim 2, see col. 3, lines 66-68 of Gies et al. Regarding claim 3, see element 30a of Gies et al. Regarding claims 5-7, 14 and 15 see element 20 of Gies et al.

Claim(s) 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gies et al. in view of Klomhaus et al. and in further view of Barton (6,210,266). Gies et al. in view of Klomhaus et al. discloses all of the limitations of the claim(s) except for sealing the flap to the support by heat staking. Barton discloses the presence of sealing the flap to the support by heat

Art Unit: 3749

staking. See col. 4, line63 to col. 5, line 5. Hence, one skilled in the art would find it obvious to modify the system of Gies et al. in view of Klomhaus et al. to include sealing the flap to the support by heat staking of Barton for the purpose of ease of manufacture.

Claim(s) 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gies et al. in view of Klomhaus et al. and in further view of Oppermann et al. (6,609,535). Gies et al. in view of Klomhaus et al. discloses all of the limitations of the claim(s) except for the rigid layer being a comb. Oppermann et al. discloses the presence of a rigid layer being a comb. See fig. 4.

Hence, one skilled in the art would find it obvious to modify the system of Gies et al. in view of Klomhaus et al. to include a rigid layer being a comb of Oppermann et al. for the purpose of a more complete seal.

Allowable Subject Matter

Claims 4, 8, 9, 12, 13 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The provided references are representative of the state of the art that is applicable to the applicant's invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derek S. Boles-at (571) 272-4872.
